## **NEWS RELEASE**

### **TISDALE RESOURCES COMPLETES IP SURVEY AT KEEFE LAKE URANIUM PROJECT**

November 2<sup>nd</sup>, 2021 – Vancouver, British Columbia – Tisdale Resources Corp. (the “**Company**”) (TSXV: TRC) is pleased to announce the completion of the 2021 geophysical investigation at Keefe Lake uranium project, in the Athabasca Basin. In all, 3.1 line kilometers of an Induced Polarization (IP) survey were conducted with 100m spacing. The objective of the survey was to investigate subsurface features and anomalies, first identified through diamond drilling and which terminated in highly silicified rocks concurrent with anomalous uranium. The company is in the process of analyzing the data. A full interpretation is expected in the near term. The Company will provide further updates on the survey work as they become available.

#### **About the Keefe Lake Uranium Project**

Keefe Lake is an advanced exploration project that covers an area of approximately 15,400 hectares, on the eastern side of the Athabasca Basin, in northeastern Saskatchewan, Canada. The project is on trend with the McArthur River, Cigar Lake and Key Lake Mines, three of the largest and richest uranium mines in the world.

Dr. Peter Born, P.Geo., a qualified person for the purposes of National Instrument 43-101, has reviewed and approved the technical content of this news release.
